

HEINEHARD

Wear parts for:

- impactors
- jaws
- cones

Modified designs for longer life

Tailored chemistry for extra life

Good credit on chrome iron scrap

Australian made

The John Heine foundry in Sydney casts white irons and manganese steels for wear parts for the mining and quarrying industries. These Australian made parts can be tailored to your requirements by adding extra pads of material in high wear areas and creating special grades of chrome iron to suit your particular application. As part of our service, we offer good credits on your worn white iron components, as we can melt down and re-cycle into new parts. We stock a large range of castings such as hammers, anvils, blow bars, impact plates etc for Canica, Cedarapids, Cobra, Extec, Hazemag, Pegson, Striker, Teesab and many other brands of machines. We also make chute and bin liner castings to suit your requirements. In addition, we can supply jaws, mantles and cones for many brands of machines. Why not ring Ray Bogg on 0458 111 503 and start saving now?
